The Telescopic Extend-A-Belt conveyor is suitable for loading & unloading crates, cartons, bags, drums, rolls and many other products.

Variations on our standard model include: Hydraulic Elevation, self-propelled & side transfer rails.

**SAFE AND EFFICIENT**

The system is designed for ease of use little training is needed to operate the conveyor. However, safety is a major consideration in the design of the operation and the components. Nose Cones have been added to the front end of the conveyor and the front control panel is relocated to the side of the unit for increased operator safety.

**BENEFITS OF THE EXTEND-A-BELT SYSTEM**

- Most efficient means of loading or unloading trucks and containers.
- This robust system is easy to operate.
- Easily integrates with existing systems and practices.
- Enables you to load/unload all trucks and trailers.
- Reduces time and effort during loading/unloading.
QUALITY COMPONENTS

Central to the integrity and long term success of any conveyor is the specification and quality of the components used. All Conveyco's components and products are designed and manufactured in Conveyco's Cape Town Factory.
### ROAD MODEL

General specification as per the Ramp Model, except for a 3.5m meter Feeder Belt increasing the unit's length. This model is mounted on mobile stands which provide the required working height inside the truck/container.

Model "D" does not have a front control panel and only has one extending segment.

### SAFE AND EFFICIENT

The company has vast experience in the South African goods moving industry and the understanding that we have developed with our partners, allows us to handle even the more taxing of problems.
